1. All dimensions are in millimetres unless otherwise stated.

2. Where construction of a stile has been specified, in all cases the rails should be extended into adjacent hedges or continued either side of the stile to fill gaps and make the structure stock-proof. Steps should be skew nailed to supports.

3. Where existing structures require to be made stable, posts should be excavated to a depth of approximately 300mm and blocks of rubble should be added as wedges, the soil returned and compacted. Loose timber should be nailed down and the structure made stock-proof, if necessary, by addition of timber rails.

4. Where a foot stool is specified to be constructed in a fence or stile, the dimensions and height above ground should be the same as that given in the drawing.

5. Where a stile is specified to be constructed in a barbed wire fence or wire fence, two additional posts should be used as strainer posts, to be placed at least 500mm from stile posts.

6. Attach 2 x 250 long off-cut rail pieces to the bottom of the post using four 100mm nails, to anchor it. Post to be secured with rubble and soil compacted, unless otherwise specified.
